

The background of the entire image is a dense, repeating pattern of teal line-art illustrations of various flowers and leaves. The flowers have different petal shapes and arrangements, some with detailed centers. A single, small red butterfly with black markings on its wings is positioned in the center of the image, slightly above the main text.

The Functional Fibre Made From
100% Textile Waste

Every year, 100B garments are produced and 85% end up in landfills, the equivalent of one garbage truck per second.¹

To help address this issue of textile waste, The LYCRA Company introduced its first-ever, cooling performance solutions made entirely from manufacturing textile waste. This innovative process utilizes a unique recycling technology to convert textile waste² into fibres, creating a starting point for circularity.

This new offering joins an established range of products under the COOLMAX® brand, including fibres made from recycled PET bottles. Recycling textile waste is another important step to address a critical need in the apparel industry.

COOLMAX® is trademark of The LYCRA Company.

¹ Ellen MacArthur Foundation, A new textiles economy: Redesigning fashion's future, 2017

² Consists of cutting scraps from garment manufacturers that would otherwise go to landfill, incineration or other low grade uses

Fibre Made From 100% Recycled PET Bottles

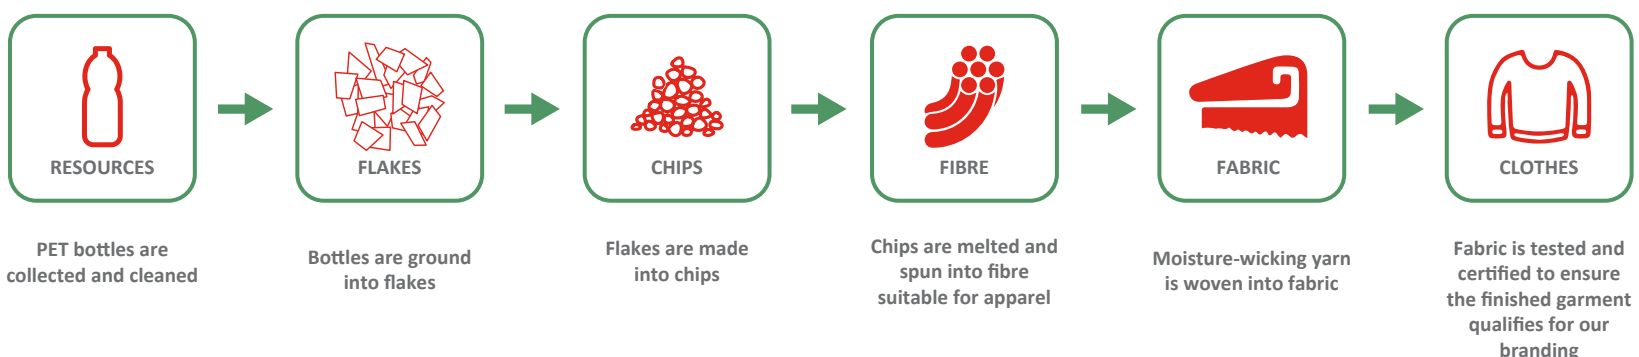

*Fibre cross-section illustration. Actual forms may vary.

ENGINEERED FOR LIGHTWEIGHT WARMTH

Fabric made with THERMOLITE® EcoMade technology provides lightweight warmth for all activities. Constructed with functional, insulating hollow fibres that last, THERMOLITE® EcoMade technology can be used in apparel and non-apparel products. And, consumers can feel good about selecting garments engineered with this technology because the fibre is made with 100% recycled resources.

*Please note, this illustration depicts the process for THERMOLITE® Ecomade fibre made from PET bottles.
